## Brazil

## Citrus Annual

## 2018

## Approved By:

Katherine Woody, Agricultural Attaché

## Prepared By:

Sergio Barros, Agricultural Specialist

## Report Highlights:

The Brazilian orange crop for MY 2018/19 is forecast at 435 million $40.8-\mathrm{kg}$ boxes ( 17.75 MMT ), an increase of 50 MBx ( 2.04 MMT ) vis-à-vis the current season. The vegetative recovery of citrus trees and favorable weather patterns should result in higher yields in the upcoming season. The current crop estimate has been revised downward from 393 to 385 MBx (16.03 MMT and 15.70 MMT , respectively) due to the smaller size of the fruits and above-average drop rates in the commercial area of Sao Paulo and western Minas Gerais. Total Brazilian FCOJ 65 Brix equivalent exports for MY 2018/19 are forecast at 1.207 MMT, an increase of 11 percent compared to MY 2017/18, due to expected higher availability of oranges for crushing in the upcoming season. Orange juice exports to the United States are likely to drop with the recovery of the orange crop in Florida.

## FRESH ORANGES

## Production

## PS\&D Tables

The following table provides revised data for Sao Paulo and total Brazilian fresh orange production, supply, and distribution (PS\&D) for Brazilian (BR) marketing years (MY, July-June) 2017/18, 2018/19, and the initial forecast for MY 2019/20, which are equivalent to U.S. MY 2016/17, 2017/18 and 2018/2019, respectively.

| Brazil: Fresh Oranges PS\&D (Jul-Jun, 1,000 ha, million trees \& million 40.8 kg boxes) |  |  |  |

* There is a 1-year lag between the Brazilian (BR) marketing year (MY) and the U.S. marketing year (MY). For example, BR MY 2019/2020 is equivalent to U.S. MY 2018/2019. As such and to ensure data continuity, the current Brazilian MY 2019/20 will be referred to as U.S. MY 2087/19 throughout this report.

## General

ATO/Sao Paulo projects the total Brazilian orange crop for MY 2018/19 (July/June) at 435 Million $40.8-\mathrm{kg}$ boxes ( MBx ) ( 17.75 million metric tons (MMT)), an increase of 13 percent compared to the current year (MY 2017/18), assuming that normal weather conditions prevail as of December 2018 to support blossoming, fruit setting, and development.

The commercial area in the state of Sao Paulo and the western part of Minas Gerais should account for 330 MBx ( 13.46 MMT), up 50 MBx (2.04 MMT) vis-a-vis MY 2017/18. Citrus trees have recovered vegetative vigor from a large crop in MY2016/17 (followed by a small crop in the current season). Good management practices have supported this recovery. In addition, current weather patterns have been favorable, resulting in an overall steady first blossoming. Production from other states is projected stable at 105 MBx ( 4.3 MMT ), similar to the current season. It is still early to project orange production for MY 2018/19. More accurate numbers will be available during the first quarter of 2019.

ATO/Sao Paulo's estimate for the MY 2017/18 Brazilian orange crop is 385 MBx ( 15.71 MMT ), a decrease of 2 percent relative the previous estimate, based on updated information from post contacts and the Brazilian Institute for Geography and Statistics (IBGE). In spite of good rainfall volumes in the last couple of months, the size and the weight of the fruit in the commercial citrus area in the state of Sao Paulo and the western part of Minas Gerais is smaller and lighter than initially forecast, mainly due to a more severe drought than expected from May to July. In addition, drop rates are reported at above average levels during the harvest, thus supporting a smaller crop output. Therefore, the revised production figure for the commercial area in the state of Sao Paulo and the western part of Minas Gerais is 280 MBx ( 11.42 MMT ), a drop of three percent compared to the previous estimate. Production from other states is estimated stable at 105 MBx (4.3 MMT).

On September 10, the Citrus Defense Fund (Fundecitrus) released its second estimate for the 2018/19 citrus crop (BR MY 2018/19) in the commercial area in the state of Sao Paulo and western part of Minas Gerais. The estimate is 273.34 MBx (11.15 MMT), a reduction of five percent compared to the initial estimate in May ( 288.29 MBx or 11.76 MMT ). Fundecitrus is expected to release the third citrus crop estimate in December 10.

The Sao Paulo State Institute of Agricultural Economics (IEA) also released the September 2018 crop survey for the 2018 crop (BR MY 2018/19). The Sao Paulo state crop, including both commercial and non-commercial areas, is estimated at 339.8 MBx ( 13.86 MMT ), an increase of five percent relative to the previous season ( 324.5 MBx or 13.24 MMT ). Note that IEA takes into account the entire state of Sao Paulo and all varieties of oranges, while ATO estimates follow the Fundecitrus methodology, which includes the commercial area of the state plus the western part of Minas Gerais and the four major citrus varieties for juice processing.

## Area, Tree Inventory, and Yields

The Brazilian agricultural yield for next year's crop (MY 2018/19) is projected at 1.91 boxes/tree, up 13 percent compared to the current crop ( 1.69 boxes/tree), assuming normal weather conditions as of December 2018. The vegetative recovery of citrus trees and favorable weather patterns should result in higher yields in the upcoming season.

Total Brazilian tree inventory for MY 2018/19 is projected stable at 227.3 million trees, as well as area planted to oranges, which is projected at 601,500 hectares (ha). Sao Paulo is the only state that compiles data on trees planted and tree inventory. ATO/Sao Paulo estimates stable area and tree population for other states based on uniform production figures provided by the Brazilian Institute of Geography and Statistics (IBGE).

## Disease

According to the 2018 greening survey conducted by Fundecitrus, 18.15 percent of the trees in the commercial area of the state of Sao Paulo and the western part of Minas Gerais are affected by greening. This figure is slightly higher relative to the 2017 greening survey ( 16.73 percent) and shows that the spread of the disease has been stable in recent years. The graph below shows the incidence of greening in the Sao Paulo and western Minas Gerais commercial area since 2012. No surveys were conducted in 2013 and 2014 due to lack of funding. Note that the infection level has remained stable over the past 4 years due to the adoption of good management practices in the orchards.

## Incidence of Greening in the Sao Paulo Commercial Citrus Area

Source: Fundecitrus
The 2018 Fundecitrus citrus variegated chlorosis (CVC) disease survey reports that the level of infection has been steadily dropping reaching 1.30 percent, as opposed to 2.89 percent in the previous year. The graph below shows the incidence of CVC in the Sao Paulo and western Minas Gerais commercial area since 2012. No surveys were conducted in 2013 and 2014 due to a lack of funding. This is the fourth consecutive year that CVC infection levels dropped mainly due to the adoption of
protected nurseries for seedlings and the renewal of old infected citrus groves. In addition, the use of pesticides to control the insect that transmits greening also control the spittlebug that transmits CVC.

## Incidence of CVC in the Sao Paulo Commercial Citrus Area

Source: Fundecitrus

On the other hand, citrus canker infection in 2018 is estimated at 11.71 percent in the commercial area of Sao Paulo and Minas Gerais, up from 8.68 percent in 2017, according to the latest Fundecitrus survey. The changes that were adopted to control the disease (e.g., mitigation of risk instead of eradicating affected and neighboring tress in a certain radius) have loosened up from the formerly rigid control.

## Producer Prices

Prices during the second semester of 2018 are notably higher compared to the same period of 2017 due to lower fruit availability. This is notably true for oranges delivered for the fresh market which has been competing with the orange juice processing plants.

According to the University of Sao Paulo's Center for Advanced Study of Applied Economics (CEPEA), orange juice processors have started to contract fruit for the upcoming crop. On average, initial contracts have been set at $\mathrm{R} \$ 22 /$ box of oranges (one or two year contracts) and may include or not a premium depending on the price of orange juice.

The Orange Index price series is published by the University of Sao Paulo's College of Agriculture (ESALQ) for both the domestic fresh market and product delivered to orange juice processing plants in the state of Sao Paulo. Prices for the fresh market are for fruit on the tree.

Orange prices paid by Sao Paulo industry - spot market (Pera, Natal, Valencia varieties, average prices in Reals - R\$, 40.8 kg box, fruits delivered to the processing plant)

## Consumption

ATO/Sao Paulo projects total Brazilian orange consumption for MY 2018/19 stable at 121.9 MBx (4.97 MMT). These figures include actual domestic consumption plus losses from natural drop, harvesting, transportation, and packing. Fruit delivered to processors for "not from concentrate" (NFC) orange production for the domestic market is also included in these figures.

Domestic consumption estimates are calculated as the difference between production estimates and the volume of oranges delivered to processors for Frozen Concentrated Orange Juice (FCOJ) and NFC produced for exports.

## Trade

Total fresh orange exports for MY 2018/19 are projected stable at 0.6 MBx ( 24 MT ). The majority of exports occur during the harvest of the commercial crop (June-December). European Union countries like Portugal, France, the United Kingdom, and Spain are the major export markets for the Brazilian fresh oranges.

The table below shows fresh orange exports (NCM 0805.10.00) by country of destination, according to the Global Trade Atlas (GTA), based on data from the Brazilian Foreign Trade Secretariat (SECEX) for MY 2014/15, 2015/16, and 2016/17 (July-June), as well as year-over-year data for MY 2016/17 and 2017/18 (July-October).

## ORANGE JUICE

## Production

## PS\&D Tables

The following tables provide revised data for Sao Paulo and total Brazilian orange juice production, supply, and distribution (PS\&D) for Brazilian (BR) marketing years (MY, July-June) 2017/18, 2018/19, and the initial forecast for MY 2019/20, which are equivalent to U.S. MY 2016/17, 2017/18, and 2018/2019, respectively.

The tables include NFC production for exports converted to FCOJ, 65 Brix equivalent, using the following conversion factor: 1 metric ton of FCOJ 65 Brix equals 5.4 to 5.6 metric tons of NFC 11.6 Brix.

| Brazil: FCOJ PS\&D (Jul-Jun, Million 40.8 kg boxes, TMT, 65 degrees brix) |  |  |  |

| Ending Stocks | 185.0 | 97.0 | 85.0 |
| Total Distribution | $1,453.0$ | $1,226.0$ | $1,332.0$ |

* There is a one year lag between the Brazilian (BR) marketing year (MY) and the U.S. marketing year (MY). For example, BR MY 2019/2020 is equivalent to U.S. MY 2018/2019. As such and to ensure data continuity, the current Brazilian MY 2019/20 will be referred to as U.S. MY 2087/19 throughout this report.

## General

ATO/Sao Paulo forecasts total Brazilian FCOJ 65 Brix equivalent production for MY 2018/19 at 1.235 million metric tons (MMT), an increase of 194,000 MT relative to orange juice production for MY 2017/18, due to likely higher availability of fruit for processing. The Sao Paulo industry is expected to
process 289 MBx (11.79 MMT) of oranges for orange juice production 215 MBx ( 8.77 MMT ) for FCOJ and 74 MBx (3.01 MMT) for NFC production, accounting for 1.135 MMT of juice ( $843,000 \mathrm{MT}$ of FCOJ and 292,000 metric tons of NFC). Other producing states should deliver 24 MBx ( 0.97 MMT ), accounting for 100,000 MT of juice.

Total Brazilian FCOJ 65 Brix equivalent production estimate for MY 2017/18 has been revised slightly up to 1.041 MMT, an increase of 9,000 MT compared to Post's previous estimate. In spite of the lower expected volume of fruit for processing at the orange juice plants in Sao Paulo, better then formerly projected orange juice yields ( 254.9 as opposed to 269.7 boxes per 1 metric ton of FCOJ) should guarantee higher juice supply.

Orange juice figures include NFC production for exports converted to FCOJ 65 Brix equivalent. There is no official estimate for NFC supply and demand in Brazil.

## Consumption

Post forecasts domestic FCOJ consumption for MY 2018/19 stable at 40,000 MT, 65 Brix. The Brazilian Association of Citrus Exporters (CitrusBR) estimates domestic FCOJ consumption at 35,000 MT, 66 Brix.

## Trade

ATO/Sao Paulo forecasts total Brazilian FCOJ 65 Brix equivalent exports for MY 2018/19 at 1.207 MMT, an increase of 11 percent compared to MY 2017/18 (1.089 MMT), due to expected higher availability of oranges for crushing in the upcoming season. The Sao Paulo industry should contribute 1.142 MMT, 65 Brix equivalent.

ATO/Sao Paulo estimates total orange juice exports for MY 2017/18 at 1.089 MMT, down 11 percent relative to the previous season, due to lower availability of fruit for processing. Orange juice exports to the U.S. are expected to drop with the recovery of the orange crop in Florida.

The tables below show fresh orange juice exports (NCM 2009.11.00, NCM 2009.12.00 and 2009.19.00) by country of destination, according to the Global Trade Atlas (GTA), based on data from the Brazilian Foreign Trade Secretariat (SECEX) for MY 2014/15, 2015/16, and 2016/17 (July-June), as well as year-over-year data for MY 2016/17 and 2017/18 (July-October).

FCOJ exports to the United States were 30,288 MT, 65 Brix equivalent, during July-October 2018, a decrease of 35,080 MT compared to the same period in 2017. NFC exports to the United States decreased from 178,651 MT from July-October 2017 to 145,681 MT during the same period in 2018. Lower exports of juice to the United States were the result of the recovery of the Florida orange crop.

The "Others" category includes both FCOJ and NFC exports. Post considers the average monthly price by country of destination for the "Others" category as a criterion to distinguish between FCOJ and NFC exports

## Stocks

Ending stocks for MY 2018/19 are forecast at 85,000 MT, 65 Brix, relatively stable compared to MY 2017/18 carryover stocks ( 97,000 MT), but lower than ending stocks for MY 2016/17 (185,000 MT) when orange production reached record levels. Stock figures include only stocks in the storage tanks of orange juice facilities (processing plants, port terminals, etc.) in Brazil. They do not include stocks owned by Brazilian companies abroad, e.g., in transit and port terminals in the United States, Europe, and Japan.

According to CitrusBR, global Brazilian orange juice inventories were 342,967 metric tons ( 66 Brix ) on June 30, 2018. CitrusBr projects global orange juice inventories on June 30, 2019 at 146,716 MT, which includes orange juice in storage tanks at processing plants and port terminals in Brazil and stocks abroad (vessels and port facilities worldwide).

## Production, Supply and Demand Data Statistics

The tables include NFC production for exports converted to FCOJ 65 Brix equivalent using the following conversion factor: 1 metric ton of FCOJ 65 Brix equals 5.4-5.6 metric tons of NFC 11.6 Brix.
