## Brazil

## Citrus Semi-annual

2019

## Approved By:

Chanda Berk, Agricultural Consul
Prepared By:
Sergio Barros, Agricultural Specialist

## Report Highlights:

The Brazilian orange crop for 2019/20 (MY 2018/19) is projected at 494 million boxes, a 26 percent increase vis-a-vis the previous season. Citrus trees are vegetatively recovered from the previous year and weather conditions supported good blossoming, fruit setting and development. Total frozen concentrate orange juice (FCOJ) production is forecast at 1.397 mmt , a sharp increase in relation to the previous year ( 1.004 mmt ) due to expected higher fruit availability for crushing. Cumulative orange juice exports to the United States during the July 2018 - May 2019 cycle are reported at $185,000 \mathrm{mmt}$ of FCOJ equivalent, significantly down from the previous cycle ( 302 mmt FCOJ equivalent), due to the recovery of the crop in Florida. FCOJ ending stocks are projected at $240,000 \mathrm{mt}, 65$ Brix, an increase of 140,000 mt compared to MY 2017/18, due to projected higher juice availability.

## Production

## PS\&D Tables

The following tables provide revised data for São Paulo state and the total Brazilian fresh orange production, supply and demand (PS\&D) for Brazilian (BR) marketing years (MY) 2017/18, 2018/19 and 2019/20 (July-June), which are equivalent to U.S. MY 2016/17, 2017/18, and 2018/19, respectively.

| Brazil: Fresh Oranges PS\&D (Jul-Jun, 1,000 ha, million trees \& million 40.8 kg boxes) |  |  |  |
| :--- | ---: | ---: | ---: |

| Others | 24.0 | 24.0 | 24.0 |

* There is a one-year lag between the Brazilian (BR) marketing year (MY) and the U.S. marketing year (MY). For example, BR MY 2019/2020 is equivalent to U.S. MY 2018/2019. As such and to ensure data continuity, the current Brazilian MY 2019/20 will be referred to as U.S. MY 2018/19 throughout this report.

## General

ATO/Sao Paulo forecasts the total Brazilian orange crop for MY 2018/19 (July/June) at 494 Million $40.8-\mathrm{kg}$ boxes ( MBx ) or 20.16 million metric tons ( mmt ), an increase of 26 percent relative to the previous season. The commercial area of the state of São Paulo and the western part of Minas Gerais should produce 389 MBx ( 15.87 mmt ), a notable increase relative to the revised figure for MY 2017/18 ( 286 MBx of oranges or 11.67 mmt ). This projection is based on the Defense Fund for Citriculture's (Fundecitrus) first citrus crop forecast, released last May. The forecast takes into account the following varieties: Hamlim, Westin, Rubi, Valecia Americana, Valencia Argentina, Seleta, Pineapple, Pera Rio, Valencia, "Folha Murcha" Valencia, and Natal.

According to Fundecitrus, the lower production from last year's crop supported the vegetative recovery and the increment of nutritional reserves in the trees. Moreover, favorable weather conditions sustained excellent blooming, fruit setting and fruit development, therefore resulting in a higher number of fruits per trees ( 783 fruits) vis-à-vis the last crop ( 564 fruits). Note that 84 percent of the harvest will be originated from the first blossoming, following by approximately 10 percent from the second blossoming.

Production for MY 2018/19 from other states is projected unchanged from the previous crop at 105 MBx, according to information provided by the Brazilian Geography and Statistics Institute (IBGE).

In February 2019, the São Paulo State Institute of Agricultural Economics (IEA) released its first survey for the $2019 / 20$ orange crop (equivalent to MY 2018/19), forecasting 331 MBx , an increase of 12 MBx compared to the previous season ( 319 MBx ). Figures include production from both commercial and non-commercial areas and are based on data collected in February 2019. Note that IEA takes into account the entire state of São Paulo and all varieties of oranges, while ATO/São Paulo estimates follow the citrus industry's methodology, which takes into account the four major citrus varieties for juice processing and includes the commercial area of the state of São Paulo plus the western part of Minas Gerais. IEA reports that the orange tree inventory in the state of São Paulo is estimated at 182.8 million trees ( 166.5 million bearing trees and 16.3 million non-bearing trees).

## Area, Tree Inventory and Yields

Brazilian agricultural yield for MY 2018/19 is estimated at 2.19 boxes/tree, an increase of 27 percent compared to last season ( 1.72 boxes/tree), due to the vegetative recovery of the citrus trees in the Sao Paulo commercial citrus area followed by steady blossomings and fruit setting and development. Total orange area for MY 2018/19 is estimated at 595,800 hectares (ha), down 5,700 hectares from previous year.

Total Brazilian tree inventory for MY 2017/18 is projected at 251.3 million trees, up 900,000 tress relative to the previous season. Fundecitrus reports a total of 195.3 million trees in the São Paulo commercial area ( 174 million bearing trees and 21.3 million non-bearing trees). ATO/São Paulo estimates stable tree population for "other" states based on uniform production figures provided by IBGE.

## Producer Prices

The Orange Index price series is published by the University of São Paulo’s College of Agriculture "Luiz de Queiroz" (ESALQ), Center for Advanced Studies on Applied Economics (CEPEA) for both the fresh domestic market and product delivered to orange juice processing plants in the state of São Paulo. Both series track orange prices from September 1994. Prices for the fresh market are for fruit on the tree. According to CEPEA, the majority of producers have already set fruit delivery contracts for the upcoming crop. Most of the contracts for the 2019 harvest were set between October and November 2018. On average, contracts were set at $\mathrm{R} \$ 20-24 /$ box of oranges and may or may not include a premium depending on the price of orange juice.

## Orange Prices paid by Sao Paulo industry - spot market (Pera, Natal, Valencia varieties, average prices in Reais - R\$, 40.8 kg box, fruits delivered to the processing plant).

## Consumption

ATO/São Paulo projects total Brazilian orange consumption for MY 2018/19 at 5.37 mmt ( 131.5 MBx ), an increase of eight percent relative to the previous year ( 4.98 mmt or 122.1 MBx ) due to the expected large fruit availability. These figures include actual domestic consumption plus losses from natural drop, harvesting, transportation, and packing.

Fruit delivered to processors for "not from concentrated (NFC)" orange production for the domestic market is also included in these figures. There is no official estimate of number of orange boxes crushed for NFC orange juice production, but industry estimates that roughly 5-7 million boxes are used for NFC production.

Domestic consumption estimates are calculated as the difference between production estimates and the volume of oranges delivered to processors for FCOJ and NFC produced for exports.

## Trade

The total fresh orange export forecast for MY 2018/19 is $1 \mathrm{MBx}(40.800 \mathrm{mt}$ ), a $0.5 \mathrm{MBx}(20,400 \mathrm{mt})$ increase compared to the previous crop due to the expected large availability of fruit. Brazil has limited market access to other countries and the majority of exports are shipped to European countries. Most exports occur during the harvest of the commercial crop, between June and December. The table below shows official fresh orange exports (Nomenclatura Externa do Mercosul - NCM 0805.10.00) by country of destination, for BR MY 2016/17 (July-June), 2017/18 and 2018/19 (July - May), according to the Global Trade Atlas (GTA) based on the Brazilian Secretariat of Foreign Trade (SECEX).

## ORANGE JUICE

## Production

## PS\&D Tables

The following tables provide revised data for São Paulo and total Brazilian orange juice production, supply and demand (PS\&D) for Brazilian (BR) marketing years (MY) 2017/18, 2018/19 and 2019/20 (July-June), which are equivalent to U.S. MY 2016/17, 2017/18, and 2018/19, respectively.

The tables include NFC production for exports converted to Frozen Concentrated Orange Juice (FCOJ), 65 Brix equivalent, using the following conversion factor: 1 metric ton of FCOJ 65 Brix equals 5.6 metric tons of NFC 11.6 Brix.

| Brazil: FCOJ PS\&D (Jul-Jun, Million 40.8 kg boxes, TMT, 65 degrees brix) |  |  |  |

| Ending Stocks | 185.0 | 100.0 | 240.0 |
| Total Distribution | $1,453.0$ | $1,189.0$ | $1,497.0$ |

* There is a one-year lag between the Brazilian (BR) marketing year (MY) and the U.S. marketing year (MY). For example, BR MY 2019/2020 is equivalent to U.S. MY 2018/2019. As such and to ensure data continuity, the current Brazilian MY 2019/20 will be referred to as U.S. MY 2018/19 throughout this report.

## General

ATO/São Paulo projects total Brazilian FCOJ, 65 Brix equivalent, production for MY 2018/19 at 1.397 million metric tons (mmt), up 39 percent vis-a-vis the previous season, due to the expected sharp increase in the number of orange boxes for crushing. The São Paulo industry is expected to process 338 MBx of oranges for orange juice production ( 263 MBx and 75 MBx for FCOJ and NFC production, respectively), resulting in 1.317 mmt of juice ( 1.025 mmt and 292,000 metric tons of FCOJ and NFC, respectively). Other producing states should deliver 24 MBx for processing.

Total Brazilian FCOJ, 65 Brix equivalent, production for MY 2017/18 is estimated at 1.004 mmt , a sharp decrease relative to the previous MY ( 1.447 mmt ), due to a significant drop in the number of boxes for processing. Final industrial yields in the São Paulo commercial area are also reported worse than previously expected, down from 254.9 boxes/1 metric ton of FCOJ, 65 Brix equivalent to 269.2 boxes/ 1 metric ton of FCOJ, 65 Brix equivalent. The São Paulo industry accounted for 245 MBx for crushing ( 175 MBx and 70 MBx for FCOJ and NFC production, respectively), whereas other states contributed 24 MBx.

Orange juice figures include NFC production for exports converted to FCOJ, 65 Brix equivalent. There is no official estimate for NFC supply and demand in Brazil.

## Consumption

FCOJ domestic consumption for MY 2017/18 is forecast unchanged at $40,000 \mathrm{mt}, 65$ Brix, compared to the previous MY, according to information provided by the industry. No official information of actual domestic consumption of FCOJ equivalent is publicly available.

## Trade

ATO/São Paulo forecasts total Brazilian FCOJ, 65 Brix equivalent exports for MY 2018/19 at 1.217 mmt , a 16 percent increase relative to MY 2017/18 ( 1.049 mmt ), due to expected higher orange juice availability. The São Paulo industry should contribute 1.152 mt , 65 Brix equivalent, whereas the remainder should come from other processing states.

The tables below show official orange juice exports (NCM 2009.11.00, NCM 2009.12.00 and 2009.19.00) by country of destination for BR MY 2016/17 (July-June), 2017/18 and 2018/19 (JulyMay), according to GTA/SECEX. The "others" category includes both FCOJ and NFC exports. Post considers the average monthly price by country of destination for the "others" category as a criterion to distinguish between FCOJ and NFC exports.

The European Union remains the major market for Brazilian exports, representing roughly 70 percent of total exports. Note the sharp reduction of exports to the United States, the second major market for Brazilian exports, in all juice categories as a consequence of the recovery of the crop in Florida during the current season.

## Stocks

Ending stocks for MY 2018/19 are projected at 240,000 mt, 65 Brix, up 140,000 mt from MY 2017/18, due to expected higher orange juice supply for the upcoming season. Stock figures include only stocks in the storage tanks of orange juice facilities (processing plants, port terminals, etc) in Brazil. They do not include stocks owned by Brazilian companies abroad, for example, in transit and port terminals in the United States, Europe, and Japan.

According to the May 2018 release of the Brazilian Association of Citrus Exporters (CitrusBR), global Brazilian orange juice inventories are projected at approximately $224,518 \mathrm{mt}\left(66^{\circ} \mathrm{Brix}\right)$ on June 30 , 2019. CitrusBR global inventories include orange juice in storage tanks at processing plants and port terminals in Brazil; and stocks abroad (vessels and port facilities worldwide).

## Production, Supply and Demand Data Statistics

The tables include "Not From Concentrate (NFC)" production for exports converted to "Frozen Concentrated Orange Juice (FCOJ)" 65 Brix equivalent.
